POLYMER FLEXIBLE STONE PANELS

STONISHTM

POLYMER FLEXIBLE STONE PANELS

Stonish polymer flexible Clay Material, is a novel, eco-friendly architectural decorative material made from modified clay, polymers, and inorganic powders, formed through a low-temperature process.

Known for being

lightweight, flexible, and offering a variety of finishes like stone, wood, and brick, it is used for interior and exterior wall cladding, ceiling and curved surfaces. It's key features include durability, fire resistance, and moisture regulation, making it a versatile and sustainable building material.

SPECIFICATION

Size: 2400mm X 600mm

Thickness: 5mm to 10mm
